A system and method for sending, via email, imaging data stored in a personal imaging repository located on a computer connected to an email web server providing an email web service. The present invention includes a personal imaging repository for storing imaging data that is to be accessed by requested web services, an email web content for emailing selected imaging data stored in the personal imaging repository responsive to user selection, such that the email web content is generated by the email web server and available for transferring to a browser. An email web server for providing the email web content and transferring the selected imaging data to a recipient mail server is further included. The personal imaging repository is an exchange infrastructure between the imaging data and available web services on the Internet.
